

**AMENDMENTS TO THE CLAIMS**

1. - 43. (Canceled)

44. (Currently Amended) A method of controlling resume-playback of one or more titles recorded on a recording medium, comprising:

storing resume information in a storing unit of an apparatus; and

resuming a playback of the titles based on the resume information by executing a resume command prestored as part of a prestored command group of the recording medium; and

~~setting resume information in a storing unit of an apparatus according to the resume command~~ wherein the resume information includes:

resume position information to be used to represent a resuming playback position of a title; and

button information identifying a selected button.

45. (Cancelled)

46. (Currently Amended) The method of ~~claim 45~~claim 44, wherein the resuming playback ~~step~~ is performed when the playback operation is returned to the title domain from a menu domain.

47. (Previously Presented) The method of claim 44, wherein the resume information further comprises a resume flag indicating whether the corresponding title is resumable or not.

48. (Currently Amended) An apparatus for controlling resume-playback of one or more titles recorded on a recording medium, comprising:

a pick up unit configured to read/write data ~~on~~from/on the recording medium;

a storing unit configured to store resume information; and

a controller, operatively coupled to the pick up unit and the storing unit, ~~and configured to control the pick up unit to read a resume command from a prestored command group of the~~

~~recording medium, the resume command being prestored as part of the prestored command group, the controller further configured to execute the resume command and control the storing unit to store the resume information and execute a resume command prestored as part of a prestored command group according to based on the resume information~~the resume command,

wherein the resume information includes;

resume position information to be used to represent a resuming playback position of a title; and

button information identifying a selected button.

49. (Previously Presented) The apparatus of claim 48, wherein the controller is further configured to control the pick up unit to read data based on the resume position information stored in the storing unit when a playback operation is returned to the title domain from other domain.

50. (Previously Presented) The apparatus of claim 48, wherein the controller is further configured to control the pick up unit to read data based on the resume position information stored in the storing unit when a playback operation is returned to the title domain from a menu domain.

51. (Currently Amended) The apparatus of claim 48, wherein the resume information further ~~comprises~~includes a resume flag indicating whether the corresponding title is resumable or not.

52. (Currently Amended) A computer readable storage medium including video data and management information recorded by a recording device and configured to be reproduced by a reproducing device in a manner instructed by the management information, the computer readable storage medium comprising:

a first area configured to store data streams of one or more titles; and

a second area configured to store the management information for management of the data streams, the management information including ~~prestore~~ one or more prestored command groups for controlling a reproduction of the data streams of the one or more titles,

wherein at least one command group ~~comprises a resume~~containing a navigation command, the navigation command for instructing an apparatus ~~prestored as part of the prestored command group, the resume command including control information to set~~ store resume information into a storing unit of ~~the~~an apparatus, wherein the resume information includes;

resume position information to be used to represent a resuming playback position of a title; and

button information identifying a selected button.

53. (Currently Amended) The computer readable storage medium of claim 52, wherein the first area ~~[[is]] further configured to store~~ stores data stream associated with a menu domain.

54. (Currently Amended) The computer readable storage medium of claim 52, wherein the resume information further ~~comprises~~ includes a resume flag indicating whether the corresponding title is resumable or not.
